

Automated ERA Processing

Billing Workflow Automation for Claims Processing

Kareo's Automated ERA Processing uses robotic process automation (RPA) to help navigate the complexities of posting incoming ERA's using specific processing rules set by your organization. Shorten revenue cycle times, improve efficiency, and streamline operations through the power of automation.

How It Works

Customized Rules: Set specific posting rules to determine which types of ERAs are automatically posted all the way down to the CAS code.

Comprehensive Processing: Our bot reads every line of an ERA looking for known conditions that may need special handling. Match payments in question and automate the necessary actions to adjust for takebacks and recoupments.

Consolidated View: After all payments are reviewed, our workbench provides a simplified view of claims that may need your team's expertise, not the hundreds that don't.

Key Benefits

Simplified Billing Workflow: Reduce a full day's worth of repetitive work performed by a biller into a few minutes.

Consistent Processing: Claims are processed the same way over and over again, helping increase first pass claims rate.

Business Growth: Automation helps improve efficiency and accuracy, allowing you to quickly scale your business.
